

**TIME-SAVERS**  
**AUTOCAD USERS**  
**WILL LOVE**  
**ABOUT**  
**MICROSTATION**

# DON'T FEAR

**CRASHES**

**LOST WORK**

**DO-OVERS**

MicroStation is more stable than AutoCAD. Work worry-free with reliable software.

MicroStation saves each command as you work, instantaneously, so you avoid lost data.

START

Less crashes, less lost data, less do-overs. You've saved time. You're a winner!

**USE  
SAME**

# COMMAND

OVER & OVER

WITHOUT  
SELECTING IT  
EACH TIME

Performing the same command several times in a row? Select a command once (like place line) and perform it as often as needed without having to re-select the command. Save time and eliminate monotony.

## DOES THE MATH FOR YOU

MicroStation automatically converts units of measure to other units on the fly at 14 decimal places of accuracy (including your own custom measurement system). Spend more time designing, not doing math.

## MEASURES FOR YOU

Need to place an element half way between two others without measuring and doing the math manually? No worries, AccuDraw helps you solve the math while you're drawing so you can spend more time creating and less time measuring.

# IT'S ALL ABOUT

## GO BIG OR GO HOME

## LEAVE NO FORMAT BEHIND

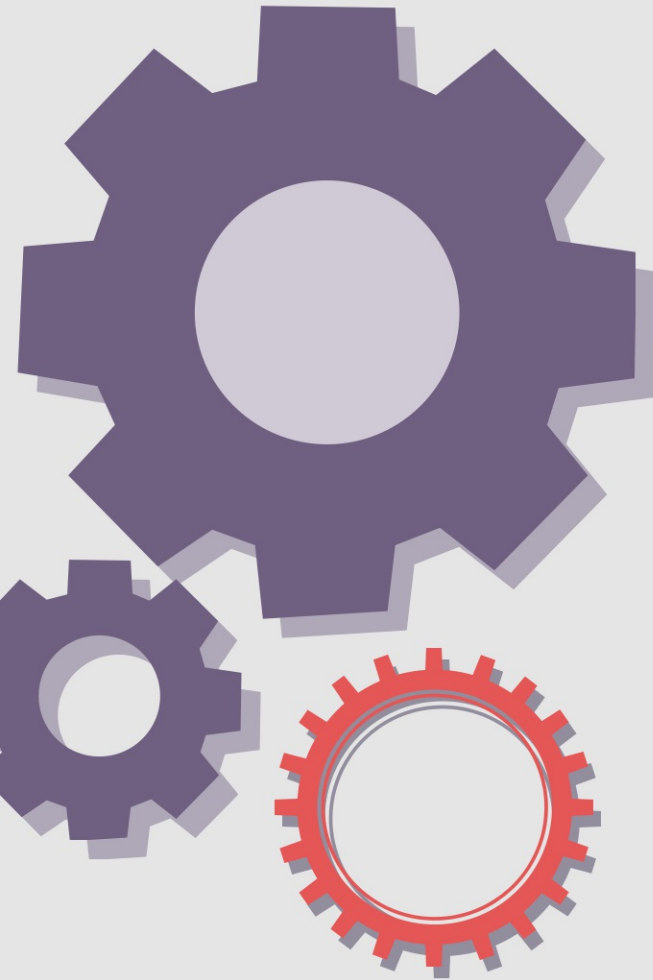

## HIGH STANDARDS, HIGH SUCCESS

# THE DATA

If your software can't handle large models and files, then you're wasting time, literally. Save time with MicroStation, built for high performance and handling of big data.

Easily integrate and produce over 100 different common data types and formats without the hassle of time-consuming file translations.

With integrated tools and templates that automatically validate standards compliance, you'll save tons of time otherwise spent manually checking standards.

# MORE TIME = MORE DESIGNS

MicroStation's powerful constraints capabilities, usable in both drawing and modeling workflows, let you maintain design intent so you can rapidly move through multiple design iterations.

# UNLIMITED UNDO & OUT-OF-ORDER UNDO

Undo anything! No matter how much time has passed, no matter how many thousands of changes you've made. You can selectively undo just one item. Even better, you can graphically compare before and after, side by side. View what was added, removed, modified, and changed. It beats starting over!
