**Price: \$13,000–\$16,825**

As we were in the process of preparing this article, Xerox announced the Xerox 6204 wide-format solution, a black-and-white copier and printer combination targeted at commercial print shops and AEC firms.

Xerox notes that the 6204 is one of the fastest units in its class and that it is ideal for customers transitioning from analog to digital printing and for those entering the wide-format printing market for the first time. It is designed to produce engineering renderings, topographic and aerial maps, and mechanical and architectural drawings in monochrome.

The Xerox 6204 is available in two configurations: a printer-only model and a printer/copier model with the optional ability to scan to a network. The printer-only model is the only configuration of its kind in the low-end digital black-and-white wide-format market. Other

products include both a printer and scanner, regardless of a customer's needs.

The Xerox 6204 prints four D-size (24" × 36") images per minute and can be upgraded to print five D-size images per minute. The 6204 prints large documents at widths from 11" to 36" at a resolution of 600×600 dpi and outputs from the front. The scanner on the Xerox 6204 scans at 600dpi at a speed of 3"/sec. You can scan documents to your network in one step, which further speeds the process.

The Xerox 6204 can be placed within inches of a wall because printed documents are delivered at the front. An integrated touch-screen interface simplifies customer use. An embedded print controller (the processor that sets up print files and transfers them to the printer) helps streamline and standardize print operations.

Xerox now offers customers five digital, black-and-white wide-format printing options—the Xerox 6204 wide-format Solution, the Xerox 510 and 721 print systems, and the Xerox 6030 and 6050 wide-format systems—to meet various speed and volume demands.
